 - Filter Canister Lid: NSF 42 certified, 125 lb. static test & 100,000 @ 150 lb. cycle test.
 - Filter Canister Lid: Material 20% glass filled polypropylene, used for maximum strength.
 - Filter Canister Seal: NSF 53 certified. BPA Free.
-
- Filter Canister Wrench: Material Polypropylene.
 - Filter Canister Bracket: Material Mild Steel.

CDW recommends that one unit per water source be installed to meet a minimum 2 gallons per minute. This rate would allow lead free water at the point of use. (Sinks, Showers, & Water Fountains).

CDW recommends that two units @ point of entry. Filters running in parallel would increase the flow rate. This will allow 4-6 gallons per minute, should

meet or exceed the requirements needed at all point of use water sources as in homes & small businesses.
